

Here technicians, expert workers and engineers can find a wide range of information and services concerning public supply and disposal networks of our cities:

-

The screenshot shows the FURNITRACC software interface. The main window is titled 'Eigenschaften von UF-Harz-Formstoffen [V012536]'. It contains a table with the following columns: 'Eigenschaften', 'Farbe', 'Viskosität', 'Dichte', 'Viskositätszahl', and 'Meltemperatur'. The table lists three types of epoxy resins: 'Epoxyharz', 'Bisphenol-A-Epoxyharz', and 'Bisphenol-F-Epoxyharz'. The 'Epoxyharz' row shows a viscosity of 100-150 cP and a melting point of 150-160 °C. The 'Bisphenol-A-Epoxyharz' row shows a viscosity of 100-150 cP and a melting point of 150-160 °C. The 'Bisphenol-F-Epoxyharz' row shows a viscosity of 100-150 cP and a melting point of 150-160 °C.

Eigenschaften	Farbe	Viskosität	Dichte	Viskositätszahl	Meltemperatur
Epoxyharz	hellgelb	100-150 cP	1,20-1,25 g/cm³	10-15	150-160 °C
Bisphenol-A-Epoxyharz	hellgelb	100-150 cP	1,20-1,25 g/cm³	10-15	150-160 °C
Bisphenol-F-Epoxyharz	hellgelb	100-150 cP	1,20-1,25 g/cm³	10-15	150-160 °C
