## Practical Guideline for the Application of Microtunnelling Methods

for the ecological, cost-minimised installation of drains and sewers

(available at December 2005)

December 2005. 111 pages DIN A4, colour printing, 86 predominantly coloured figures and diagrams, 26 tables Paperback cover.

English edition.  
**EUR 39.00**

**Offer to buy do only apply to Stein & Partner!**

The guideline presents an abridged version of the German original edition, published by the Ministry for Environment and Nature Protection, Agriculture and Consumer Protection of the German federal state North Rhine-Westphalia (MUNLV NRW) and offers an overview, presented for the first time in this form and quality, of the possibilities of trenchless installation of non-accessible drains and sewers.

The steerable methods of pilot pipe jacking and of microtunnelling, which are available and have proved in practice in Europe today, are described from a practical point of view by taking into account their application areas and the ancillary conditions which are to be looked at from various perspectives during planning and construction.

This English translation and the first-class and completely coloured

layout of the guideline was performed for the international market by the engineering office Prof. Dr.-Ing. Stein & Partner GmbH, Bochum (Germany).

It was created with the aim of providing people working for local authorities, municipalities and drainage service companies as well as engineering companies, who are responsible for the new construction of sewers, with a practically oriented working aid for taking the trenchless construction method into consideration. Furthermore, it should serve as a source of information and guidance for the planning and execution of sewer construction measures.

# FROM THE CONTENTS

- **Introduction**
- **Standards, Regulations and Terminology**
- **Description of the Method**
  - Pilot Pipe Jacking (two-phase jacking, three-phase jacking)
  - Microtunnelling (with auger spoil removal, with hydraulic spoil removal, with pneumatic spoil removal)
- **Jacking Pipes**
  - Pipe materials
  - Pipe joints
  - Delivery and storage on the construction site
  - Calculation
- **Geotechnical Investigations**
  - Geotechnical report
  - Soil- and rock classification according to DIN 18319
- **Starting- and Target Shafts**
  - Definition and tasks
  - Selection of the location and the number of shafts
  - Form and dimensions
  - Shaft construction methods
  - Exit- and entrance openings
  - Inclusion of the jacking pipes into the shafts
- **Obstacle Problems**
- **Jacking Steering and Monitoring**
- **Laterals**
  - Connection to jacking pipes
  - Connection to manholes and inspection chambers
- **Work Safety and Health Protection**
  - Shaft construction
  - Additional regulations for microtunnelling and pilot pipe jacking
- Load transport, load handling attachment, lifting gear
- **Planning**
- **Construction**
- **Inspection and Testing of the Sewer after the Installation**
  - Inspection
  - Leaktightness testing
- **Economic Considerations**
  - Direct and indirect costs
  - Trenchless construction method
  - Comparison of the open-cut and trenchless construction method
- **Instructions for the Use of this Guideline**

## ORDER FORM

☐ **Yes**, please send me the following title for 39.00 EUR apiece:
